

Day: 7/ Cup B	The plants in this cup are tall and healthy. $\frac{4}{5}$ of the seeds germinated and grew. They are all different heights, different sizes, and different colors. They all appear to be healthy. The tall plants are started to bend above the flimsy stem. They are not dying or droopy yet though.	8.5cm 9cm 4cm 2.7cm

Plant Growth Graph:

Since Cup A did not have sprouts tall enough to measure I did not make a graph.
